MSc Degree in Equipment engineering

As an equipment manager, you are responsible for maintaining the pumping equipment used to extract the oil and gas from the earth. You also work closely with operations managers to report any deficiencies in the equipment. In addition, you may be assigned to safety or design teams as needed.

Quality control engineer

This role is probably the most important specialty within the company. Your job as a quality control inspector is to ensure the proper functioning of the pumping equipment. In addition, you work closely with the other team members to ensure full compliance according to specifications.

Design engineer

Design engineers design new equipment to use for gas and oil drilling. They also modify existing equipment to make it more efficient and functional.

These specialized fields require at least a bachelor of science degree in mechanical engineering. The good news is that most accredited programs cover the necessary prerequisites for entry into the sector. However, some employers may want you to have a master's degree to cover additional certifications demanded by federal law.

Degree Type:

MSc Degree

Entry Requirement: Good Bachelor's Degree or Higher Diploma

Next Start Date:

January 2024
